The MBT token utilizes a fair-launch Bonding Curve (via the BondDepository contract) to provide near-zero slippage during the initial launch phase.

Graduation Mechanism:

Once the Bonding Curve mints exactly 50,000,000 MBT, the contract automatically triggers a secure migration. This permanently disables the curve's buy/sell functions, seeds the QuickSwap LP pool, and automatically locks the resulting LP tokens.

LP Lock & Immutability:

100% of the QuickSwap LP tokens are locked for 365 days via a third-party smart contract locker (Team Finance / Unicrypt). Combined with the permanently renounced ownership, a liquidity removal (rug pull) is mathematically impossible.
